

Introduction to PETSc

Scalable ODE and DAE Solvers: TS

Fall, 2010

Level of
Abstraction

Portable **Extensible** Toolkit for Scientific computation

PETSc Structure

Scalable ODE and DAE Solvers (TS)

- Application code interface
- Choosing the solver
- Setting algorithmic options
- Viewing the solver
- Determining and monitoring convergence
- Matrix-free solvers
- User-defined customizations

Time-Dependent Problems:

$$U_t = F(U,t), \quad U(t_0): \text{ given}$$

User provides:

- Code to evaluate $F(U,t)$
- Code to evaluate Jacobian of $F(U,t)$ (optional)
 - or use sparse finite difference approximation

Scalable ODE and DAE Solvers (TS)

- Explicit methods
 - Euler, Runge-Kutta
- Implicit methods
 - Backward Euler, Crank-Nicolson, etc
- Differential algebraic equations (petsc-dev):
$$F(t,U,dU) = 0, U(t_0) = U_0$$
- Interface to Sundials's CVODE
 - <https://computation.llnl.gov/casc/sundials>
 - Configure with ‘--download-sundials’
 - Run application with ‘-ts_type sundials’
- Solving steady-state problems with pseudo-timestepping
- Can customize all phases of solution process

TS: Basic Usage

```
TSCreate(comm,&ts);
TSSetProblemType(ts,TS_NONLINEAR);
TSSetType(ts,TSBEULER);
TSSetRHSFunction(ts,RHSFunc,&userctx);
TSSetRHSJacobian(ts,J,Jpre,TSDefaultComputeJacobian,&uerctx);
TSSetInitialTimeStep(ts,t0,dt);
TSSetSolution(ts,u);
TSSetDuration(ts,time_steps_max,time_total_max);
TSSetFromOptions(ts);

TSStep(ts,&steps,&ftime);

TSDestroy(ts);
```

Time step options -----

- `-ts_max_steps <1>`: Maximum number of time steps (TSSetDuration)
- `-ts_max_time <1>`: Time to run to (TSSetDuration)
- `-ts_init_time <0>`: Initial time (TSSetInitialTime)
- `-ts_dt <0.0001>`: Initial time step (TSSetInitialTimeStep)
- `-ts_monitor <stdout>`: Monitor timestep size (TSMonitorDefault)
- `-ts_monitor_draw: <FALSE>` Monitor timestep size graphically (TSMonitorLG)
- `-ts_monitor_solution: <FALSE>` Monitor solution graphically (TSMonitorSolution)
- `-ts_type <beuler>`: TS method (one of)
euler beuler cn pseudo gl ssp theta alpha,
sundials rk (TSSetType)

And many more options...

Example:

`~petsc/src/ts/examples/tutorials/ex7.c`
